**DETAILED ACTION**

**Amendments**

1. The amendments of have been entered. Claims 97-99, 101 and 109-116 have been amended. Claims 1-96 have been canceled. Claims 97-116 are under consideration.

***Withdrawal of Objections and Rejections***

2. The following objections and rejections have been withdrawn in view of applicants' amendments and arguments:

- a) The objection of claims 97-99, 101 and 115;
- b) The new matter rejection of claim 116 under 35 U.S.C. 112, first paragraph; and
- c) The rejection of claims 97-115 under 35 U.S.C. 112, second paragraph.

***Allowable Subject Matter***

3. Claims 97-115 are allowable. The closet prior art is Cavanaugh et al., (1998) who teach that transferrin, which is a ligand, binds to a specific cell surface receptor which binds two iron-saturated transferrin molecules and is responsible for the delivery of iron into cells either through internalization of iron-transferrin or activation of a Plasma membrane that mediates the trans-plasma membrane transport of iron from transferrin. However Cavanaugh et al., (1998), do not teach or suggest, a method for the

quantification of ligand binding to a surface, using haptен-conjugated ligands, comprising: a) applying a haptен-ligand, comprising a ligand possessing an antibody-recognizable haptен, to said surface, and, b) waiting for a period of time, so as to allow a binding of said haptен- ligand to said surface, thereby producing bound ligand, and, (c) removing any unbound haptен-ligand, from said surface, and, (d) solubilizing said bound ligand, thereby producing a lysate, and, (e) applying separately onto a membrane, (1) said lysate, and, (2) a plurality of standards, comprising solutions containing increasing levels of known amounts of the haptен-ligand, thereby producing membrane-bound haptен-ligand and, (f) applying to said membrane, (1) an enzyme-conjugated antibody to specific for said haptен, and, (2) a color or light-producing substrate that contacts the enzyme on said enzyme-conjugated antibody, thereby producing a signal, and, (g) comparing said signal arising from said enzyme associated with said membrane-bound haptен-ligand arising from said standards, to the known amount of haptен-ligand contained in said standards, thereby producing a standard curve, and, (g) comparing said signal arising from said enzyme associated with said membrane-bound haptен-ligand arising from said standards, to the known amount of haptен-ligand contained in said standards, thereby producing a standard curve, and quantifying the amount of said haptен-ligand originally bound to said surface, by quantifying the amount of the haptен-ligand contained in said membrane-bound haptен-ligand arising from said lysate, by comparing said signal arising thereof to said standard curve and, whereby the use of radio- labeled ligand is avoided.

4. Claims 97-116 are allowed.
